

PUTZ POMADE CLEANER

Roller, Blanket and OPC Drum Cleaner

This is the original roller and blanket cleaner. Putz Pomade Liquid Flow and Putz Pomade Paste are excellent for deepdown cleaning and restoration of over-used or neglected rollers. They use microfine granules to remove all traces of ink and other contaminants from rubber rollers and prolong the useful life of the rollers.

Use Putz Pomade Liquid Flow to clean and extend the life of OPC drums used on digital presses such as Xeikon.

Benefits for Rollers and Blankets

Can be used while the press is inked • Works with black or yellow inks • Shortens the wash-up time by up to 50% • Reduces wasted sheets to reach color approval • Improves print quality • Stops the glazing and stripping process of rollers • Deep cleaning and deep deglazing action restores optimum ink distribution • Removes dried-up crystallized ink from rollers • Nonflammable and not harmful to skin

Benefits for OPC Drums

Some of the above benefits apply to OPC drums, greatly improving the useful life of the drum.

Packaging

Liquid Flow

Bottle 15 oz./444 ml (6 per case)

Paste

Tub 15 oz./444 ml (12 per case)

Directions

For Color Changes and Rollers:

Remove the plate prior to cleaning the rollers. Apply a thin bead to the feed roller and idle the press for a few minutes. Clean up as usual. Thoroughly remove all Putz Pomade during clean-up.

For Blankets:

Apply Putz Pomade to a cleaning pad. Wipe the blanket in a circular motion and clean up as usual.

For OPC Drums:

Apply Putz Pomade Liquid Flow to a lint-free cloth and wipe Putz on the drum to remove toner particles.

Use a dampened and soft lint-free cloth to remove the Putz and run about 50 sheets to prepare the unit for printing (it is important not to use an excessive amount of water to remove Putz as it can get inside the end seams of the drum). Or completely remove all the Putz product with a soft, lint-free cloth before printing.
