

FOUNTAIN SOLUTION FILTERS

Finer particulate removal from the fountain solution

The Fount-N-Kleer™ II replaces conventional reticulated foam and bag-style filters in fountain solution recirculators to provide a finer particulate removal.

The large surface area and depth-style media provide high ink- and dirt-holding capacity. The unique construction of Fount-N-Kleer II helps reduce foam; it will not balloon out due to high flow or pressure. The non-woven polypropylene medium is very efficient, yet open enough to permit vacuum-assisted gravity return from the press.

Fount-N-Kleer II is equipped with a .5"/1.27mm hose barb for retrofitting in existing fountain solution recirculators in place of the reticulated foam filter canister.

Features

- Is easy to install and change
- Extends fountain solution life
- Decreases fountain maintenance
- Produces instant results
- Improves product quality

Packaging

6 filters/case
