

POLY BAG FILTERS

It is easy to maintain clean fountain solution when you equip your press with Poly Bag Filters

Solid debris circulating in the fountain solution is trapped in the Poly Bag® Filter; the bag material absorbs emulsified ink and other oily contaminants.

Simple Installation

Installation is simple and economical because these filters eliminate expensive in-line canister systems.

Just slip the neck of the Poly Bag Filter over the end of the fountain system return line, secure the neck (use the tie that is included, or a hose clamp) and place the Poly Bag Filter in the recirculating tank.

Available Sizes

The Poly Bag shown here is 8x12"/20x30cm. We offer a complete range of larger and smaller sizes for all applications.

Standard Poly Bag Filters are supplied with a neck to fit a return line with an outside diameter of .75"/1.9cm. If your unit is different, please specify the outside diameter of the line to assure a correct fit.

When service counts, count on Grafitec.
