

AUTOMATIC BLANKET WASH SYSTEM CLEANING ROLLS

Less Waste

This material helps keep your presses running effectively and efficiently. It is highly absorbent and low linting, yet incredibly strong, even when wet. It helps remove ink and solvents from blanket and impression cylinders quickly and completely, and will not distort nor tear under tension.

Improved Print Quality

Only spotless blanket and impression cylinders can deliver truly high-quality print. Color corruption by small specs of dust, dirt and lint can ruin an entire print run.

Automatic blanket cleaning cloth rolls are readily available for these sheet-fed and web offset printing presses: Akiyama, Baker Perkins, Electra, KBA, Harris, Heidelberg, Komori, Koenig & Bauer, MAN Roland, Miller, Planeta, Mitsubishi, Ryobi, Shinohara, Timson and Toshiba, among others.

When service counts, count on Grafitec.

Manufactured from DuPont Sontara® PC™ First-Quality Material

Because you demand the highest performance from each part of the printing press, we offer blanket cleaning cloth rolls that are made only from DuPont Sontara PC original, first-quality material and the only material recommended for automatic blanket cleaning systems by the original equipment manufacturers.

No matter how good your presses are, any print job can be ruined if the blanket or impression cylinders are not clean. These blanket cleaning cloth rolls are a simple, proven solution that can cut waste, save time and raise the quality of your product.

Precision Fit

The cloth rolls are precision-made for exact fit and optimal cleaning performance.

Available for All Systems

We can provide these cloth rolls to fit every cloth-type automatic blanket wash system, cylinder cleaner, chill roll cleaner and plate roll cleaner in your plant. We can also quickly meet any custom requirement or specification.
