

PLATE CORRECTION PENS

The CTP-1000 pen deletes unwanted images from all metal plates, including CTP (computer-to-plate) coatings and fast exposure plates

Characteristics

- Incorporates fine, medium and broad tips in one pen
- Accurately deletes any size image
- Quality construction of barrel, end caps and tips reduces evaporation, thereby extending the life of the pen
- Barrel holds 4.2ml of deletion liquid, which is approximately more than 2.5 times that of conventional pens

- Cost savings by using one pen for all aluminum plates
- Easy and convenient to use
- Permanently eliminates the image

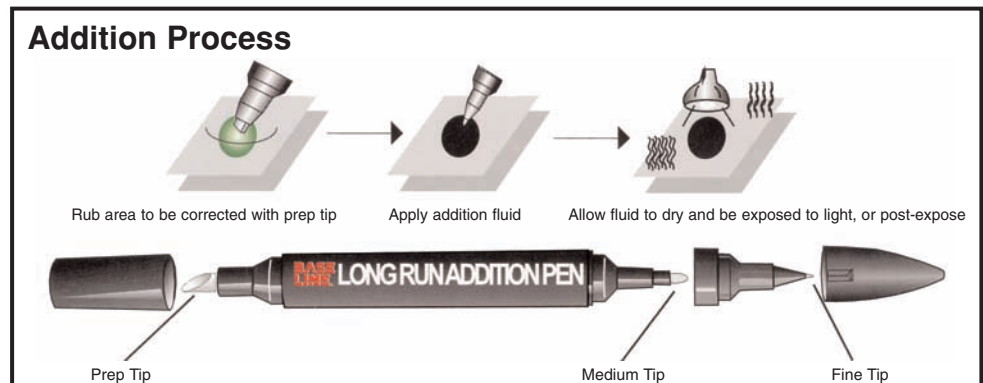

How to Use

- Apply the deletion fluid.
- Gently rub.
- Clean the plate.
- Allow the plate to dry.

The CTP-2000 addition pen adds an image to all metal plates that lasts for hundreds of thousands of impressions

Characteristics

- Includes a prep tip, fine tip and medium tip, all in one pen
- Prep tip prepares the surface to accept the image
- Fine and medium tips accurately add any size image
- Quality construction of barrel, end caps and tips reduces evaporation, thereby extending the life of the pen
- Barrel holds 4.2ml of addition liquid which is approximately more than 2.5 times that of conventional pens

- Image will not be lost even on long press runs

How to Use

- Rub the area to be corrected with the prep tip.
- Apply the addition fluid.
- Allow the fluid to dry and be exposed to light, or post-expose.

Grafitec International Inc. Service and Quality

Grafitec International Inc. has been supplying and exporting products for the printing, packaging and graphics arts industry for over 26 years. You can be assured that we distribute quality products and provide excellent exporting services to insure that all shipments arrive safely, quickly and as economically as possible.
