

SWIFTY

Roller Cleaner and Conditioner

Swiftly is a white, creamy, viscous liquid that is designed to remove glaze, lint and other contaminants from the rollers. It contains an emulsified plasticizer that will break through the glaze barrier found in the pores of unclean rollers and provide a deep cleaning: the result is a smooth and ink-receptive surface.

When Swiftly is applied to a clean roller train, it will bring out the original color. The rollers will again take the desired dull look that was intended by the roller manufacturer.

Benefits

- Removes glaze, lint and other contaminants
- Cost-effective because only a small amount is required for deep cleaning
- The small amount required for deglazing will reduce VOC's in the pressroom
- Will not swell rubber
- Enhances ink receptiveness

VOC

.72 Lbs. per gallon/86 grams per liter

Directions

Wash off excess ink. Pour a small amount of Swiftly along the top rollers and allow it to work into the roller train for 3-4 minutes. Apply again if necessary to keep the rollers wet. Engage the wash-up blade and squeegee off the emulsified glaze. Flush off with a water-miscible press wash. Repeat if necessary. (Swiftly is not designed to be left on the blanket for a prolonged period of time, such as overnight.)

Packaging

Bottle 32 oz./946 ml (12 per case)

Bottle 1 gallon/3.8 liters (4 per case)
