

INK ADDITIVE FOR QUICK JOB DRYING

No more waiting for jobs to dry: FarGel® is a patented ink drying activator that prevents the undesirable transfer of ink from the printed side of a sheet to the underside of the next sheet in the delivery pile

FarGel allows you to print faster, without messy sprays or powders. It dries the ink from both the bottom up and the top down.

Porous substrates activate it to make jobs dry faster, but it will not shorten the period of time that ink can remain open in the ink train and can optimize the inking distribution.

FarGel works with oil-based, soy, acrylic, laser/thermal and rubber-based inks.

Advantages

- Faster drying allows for faster job turn around
- Prevents set-off (the transfer of ink from one sheet to the next)
- Reduces ink tack
- Optimizes inking distribution, avoiding high surface tension
- Helps stop emulsification and the build-up of ink on the plate, rollers or blanket

- Will allow ink to stay open in the ink train for a longer period of time
- Works on any porous paper stock
- Works with any dampening system, conventional or integrated
- Works well with metallic inks and overprint varnish
- Works with oil-based, soy, acrylic and rubber-based inks
