

# INK STIMULATOR/DRIER

## *Fountain Additive to Accelerate Ink Drying*

Ink Stimulator/Drier is a water fountain additive that significantly speeds the drying time of oil- and rubber-based inks by increasing the rate of oxidation. This means less ink set-off, less streaking and less spray powder usage. Important delivery dates may be missed due to slow ink drying: the use of Ink Stimulator/Drier speeds up the drying process and increases the production and job turn-around time.

### **Benefits**

- Faster drying of inks
- Works with all acid-based fountain solutions
- Reduces streaking and set-off
- Increases production
- Presents no adverse affect on fountain solutions

### **VOC**

.25 Lbs. per gallon/30 grams per liter

### **Directions**

Add 1-2 ozs. to each gallon/8-16 ml to each liter of working fountain solution.

### **Packaging**

1 gallon/3.8 liters (4 per case)
