

GLE D5000 STANDARD VIEWER

Economical D5000 Transparency Viewers for Tabletop Viewing

GTI® is pleased to introduce additions to the outstanding Graphiclite® line of D5000 transparency viewers. The GLE series of viewers brings the high quality of GTI products to a new, affordable level. Graphiclite 100 color viewing lamps, in combination with a spectrally balanced reflector and diffuser, provide the accuracy for which GTI is famous. The low price means that more color professionals can enjoy the benefits that true standard viewing provides.

Graphiclite 100 Lamps

These color viewers combine the same Graphiclite 100 color viewing lamp used on more expensive color viewers, reflector and spectrally balanced diffuser. This combination provides a true D5000 color viewing system at an affordable price for all critical color viewing professionals.

The GLE series is available with an intensity control feature that allows the user to control the intensity of the light. This dimming feature is ideal for soft proofing applications.

Transparency/Reflection

The GLE can also be used with a PDV-e professional desktop reflection viewer to create a combination print/transparency viewing system. See our PDV-e brochure for more information on this option.

Available Models

GLE-10 with viewing area of 8x10"/20x25cm
